Community Health Needs Assessment

TRMC CHNA

- Following documents were used by TRMC for the Titus County 2021 – 2023 Community Health Needs Assessment:
 - The Health Status of Northeast Texas – 2021 by The University of Texas at Tyler
 - HHSC Social Determinants of Health Titus County
 - HHSC 2022 Titus County Community Health Questionnaire

Documents above available on request.

TRMC CHNA

Community Focus	Initiative
Mental Health	Sustain and enhance collaborations and referral relationships with local mental/behavioral health service providers.
Chronic Illness	Improve the understanding and management of chronic disease. Collaboration focused on stroke, hypertension, and diabetes. TRMC will begin implementation of Clinical Integrated Service Lines.
High Emergency Department Utilization	Care coordination among a team of providers is the most effective way to treat patients with clinically complex care. Such treatment unfolds in time and is beyond the scope of an emergency department. The high costs of emergency department treatment and the lack of a continuum of care make the emergency department the least effective place to receive care. TRMC will lead and work in collaboration with community organizations and not-for-profits to expand services and access with a focus on the Community of Color, families living in poverty, people at high risk of disease, and those with ongoing challenges managing existing health conditions.
Aging Population	Address aging population demographic by improving access to health care and provide health education for the aging population in the community.
Oncology	Development of community focused patient centric Oncology Service Line.
Healthy Living	Partner with area school districts to implement instructional activities promoting physical activity and healthy decisions.
Labor Market	Pursue affordable health care through development of local resources to provide critical clinical support roles.
